

1. The Pharmaceutical Representative places sample medication into bags containing a one month supply. The three label strip is placed into the bag after the Pharmaceutical Representative fills out label number one and two. The medication is then placed into the appropriate bin in the sample closet by the CSS.

2. The Provider gives the bag containing sample medication to the patient and places label number one in the chart adding the date dispensed. The provider places label number two in the log book adding the date dispensed and the patient chart number. The provider then fills out label number three which remains on the medication bag for patient reference.
